ABOUT

TUNNEL TURKEY 2026

www.tunnelturkey.org

9th International Tunneling Symposium in Turkey" (Tunnel Turkey 2026)
Main Theme: Tunneling Under Difficult Conditions
Date and Location: November 12-13, 2026, Fairmont Quasar Istanbul Hotel

The Turkish Tunneling Society, since its founding in 2012, has considered it its mission to bring together each year those passionate about tunneling and to discuss new topics. The need for tunnels in Türkiye is increasing every year. Discussing problems and keeping up with new technologies is essential for the rational construction of these tunnels.

We believe that the 9th International Tunneling Symposium and Exhibition, which we will organize between November 12-13, 2026, will broaden our horizons. We welcome all our stakeholders to the symposium. Academicians, suppliers, project developers, and practitioners will have the opportunity to discuss problems, solutions, and new technologies related to the tunneling. The symposium presentations will be delivered by nationally and internationally recognized experts and will be simultaneously translated from Turkish to English and English to Turkish.

Main Topics of the Symposium

- Difficult ground conditions, tectonic stresses, faulting, karstic grounds, squeezing ground, swelling ground, excessive water ingress.
- Hyperbaric Intervention in the TBM pressure chamber, tunnel face stability problems and proposed solutions, chemical injection.
- Machine performance-ground relationships, case studies, modeling and numerical solutions.
- Environmental issues limiting the use of construction chemicals, international standards, carbon emissions, foaming chemicals, concrete and shotcrete chemicals, polymers, water-repellent chemicals, etc.
- Gassy tunnels (mechanized or conventional), gas control, ventilation, gas measurement and monitoring, fan technology, automation, air and dust analysis.
- Remote sensing, deformation measurements, ground improvement.
- Applied hydraulics for tunnel machines, hydraulic control (breakdown-failure detection, sensors, etc.).
- Artificial intelligence, digital twinning, digital transformation in tunneling.
- Long tunnels, large diameter tunnels and associated problems.
- Very hard – very abrasive grounds, comparative TBM and drill-and-blast tunneling.
